

**Matthews Medical Books**

# Patron Driven Acquisitions

In response to the challenges libraries are facing to maximize efficiency and value in Collection Management, Matthews has developed a Patron Driven Acquisitions Program. This program is designed to fit the needs of your changing library while continuing to deliver the service you have come to expect from Matthews.

## Flexibility/Customization

- Choose which items you want available as PDA or receive a file of eligible PDA titles to load onto your ILS
- Select print books, ebooks or both as PDA
- Option of having a Matthews librarian select the items, do it yourself via our web approval plan or a combination of both
- Items not triggered for purchase will be removed after a given time frame based on parameters set up by the library

## Print Books

- Select print items as PDA and ensure that every item in your collection has usage
- OCLC MARC records available for each item
- Table of content and cover scans available
- Option of receiving an initial load of PDA titles

## Ebooks from ebrary®

- Triggering System based on real usage
- Free MARC records
- Real-time delivery of titles
- Set up profile to receive content automatically by subject, publisher or both
- Weekly reporting from ebrary®
